

Inserting Special Characters in iWork

You can easily add symbols and special characters in any iWork application. The characters include mathematical symbols, pictographs, bullet points, currency symbols, etc. Use this guide to find out how to use them.

In any iWork application, select Edit on the top menu:

Once you select Special Characters, a new window will appear that shows you all the options for symbols you can add.

Select an option along the left column to narrow down your results. Once you find a symbol you'd like to use in your document or presentation, simply drag it into the document where you'd like it.

When it's in the document, you can edit it the same way you edit text: changing the style, color, size, etc.
