

Changing Tempo in Garageband

Once you start a project in GarageBand, if you realize you need to change the tempo it is an easy change to make. Use this guide to learn how to change the tempo.

Select Control from the menu bar along the top.

Look for “Show Tempo in LCD” and select it. From there, look along the bottom in the GarageBand window for the LCD panel:

You can click on the tempo number (in this example it is 120) to bring up a slider to adjust the tempo up or down. You can also easily change the key and signature time of the project in the LCD window.
